

SW EFC Tribal Wastewater Program

What is the SW EFC's tribal wastewater program?

Through this program, we aim to:

- Provide **training and technical assistance** to tribal communities for the prevention, reduction, and elimination of pollution.
- Enable tribal communities to **comply with environmental regulations** and **build their technical, managerial, and financial capacity** to sustainably operate wastewater infrastructure.
- Ensure that tribal communities have **access to public funding** to meet wastewater infrastructure needs.
- Support tribal communities in **protecting both public health and the environment**.

Through this program we can help tribal wastewater systems in **EPA regions 6, 7, and 8**.

What services could my system receive through the program?

Needs Assessments:

We can work with tribal communities to assess their wastewater infrastructure and capacity needs.

Funding Technical Assistance:

We can assist with project planning, applying for funding, and project implementation for wastewater infrastructure projects.

Training for TMF Capacity Building:

We offer a wide range of in-person and virtual training to build the technical, managerial, and financial capacity of tribal communities to protect the environment and public health.

Peer-to-Peer Learning:

We will facilitate P2P funding sessions and a P2P community where tribal wastewater systems can receive advice from their peers, share resources, create networking connections, and establish partnerships with other systems.

How can my system get assistance?

To request assistance or learn more about the program, communities may email us or visit our program webpage:
